PROFILE

I am a second-year computer science student at Newcastle university. I'm really interested in learning and figuring out how things work, especially when it comes to building software that actually solves real problems. I enjoy exploring different programming languages and tools, and I'm always curious about better ways to design and structure systems. I like working on mobile, full-stack, and data-driven projects, especially when they involve building something scalable and user-focused. For me, it's about having fun, writing efficient code and constantly improving.

EDUCATION

Newcastle University

Computer Science BSc

2024 – Ongoing

- Stage 1 Overall Average: 79.9%
- Stage 2: Overall Average: 82.8%

St Aidan's and St Anthony's Catholic Academy

A-Levels

2023 – 2024

- Mathematics: A*
- Physics: A
- Computer Science: B

SKILLS

C, C++, Python, Java, Kotlin, Jetpack Compose, Swift, SwiftUI

Problem Solving, Teamwork, Communication, Adaptability

LANGUAGES

English ●●●●●
Hindi ●●●●●
Punjabi ●●●●●
Urdu ●●●●◐

PROJECTS

Click Title for GitHub page.

Kalanikethan App

Android application developed to track student attendance for a South Indian dance company. Implemented GDPR-compliant data handling with a real-time PostgreSQL backend and Kotlin + Jetpack Compose frontend.

Rota App

Full-stack rota management PWA (TypeScript, React, Node.js, Prisma, PostgreSQL) deployed on Railway — actively used by a restaurant business to manage employee scheduling, shift swaps, and holiday requests.

HackSheffield 9 Project

Collaborative Python web application developed during a hackathon to support learning for users with disabilities, featuring educational tools and AI-assisted functionality.

CHIP-8 Emulator

Low-level CHIP-8 emulator developed from scratch in C, implementing instruction decoding and execution, memory and register management, graphics rendering, timers, and event-driven keyboard input with SDL2.

Physics Engine

C-based planetary gravity simulation demonstrating memory management, array manipulation, and object handling, rendered using Raylib.

EXPERIENCE

Mobile Tech Guide

BT Group – EE

April 2025 – Ongoing | Cobalt Business Park, Newcastle

- Take ownership of customer cases from initial contact to resolution.
- Diagnose and resolve technical issues using structured troubleshooting methods.
- Adapt technical explanations for customers with varying technical literacy.
- Balance customer engagement with real-time system investigation while meeting performance targets.
- Resolve concerns empathetically while adhering to policy and escalation procedures.
- Maintain up-to-date knowledge of mobile technologies, plans, and internal systems.

Tutor

Explore Learning

August 2022 – April 2025 | Kingston Park, Newcastle

- Monitored academic progress and adapted teaching strategies to individual student needs.
- Collaborated with parents and managers to support development and communicate progress.
- Delivered clear, constructive feedback in a professional learning environment.
- Maintained safeguarding standards in compliance with OFSTED regulations.
- Built positive and motivating relationships with students.

IP^3 Summer Placement

Institute of Particle Physics and Phenomenology

June 2023 – July 2023 | Durham

- Analysed particle collision data using Python to assess Higgs boson production signals.
- Developed scripts to process and visualise large experimental datasets.
- Collaborated within a research team and adapted to evolving project requirements.
- Worked across departments to understand components of a large scientific workflow.
